**BIO 08-05**

## Semi Dry Blotter - Mini (BIO 08-05)

Blotters are electro transfer systems designed to quickly and efficiently transfer proteins and nucleic acids from gels onto blotting membranes. Wet blot transfer devices require a gel and membrane to be sandwiched and immersed in buffer, followed by continuous electrophoresis. semi-dry blotters carry out electrophoretic transfer using significantly less transfer buffer and in a shorter amount of time

Technical Specification:	
Material	Acrylic
Dimensions	12x10x7cm
Spacer	1 No
Gel Size	10x10cm
Graphite	HD Grade Imported
Compactible Gel Thickness	0.5 to 10mm
Connecting Cord	1 Pair
